I chose to learn more about the role of a Data Analyst. A data analyst helps a business with the transforming, profiling, and cleaning of data. This leads them to design and build scalable data models that make reports for analysis. They work with shareholders to identify important data then they take raw data and make it meaningful and relevant. This role interests me because I will be a data analyst once I graduate. It specifically ties in with my degree. I would bring value to my future work of company. Now data analysts save companies money with efficiency, improving operational tasks, and minimizing risks. From learning more about data analyst, I would like to cover Power BI. I've heard companies use it for data modeling. I think it would be beneficial for us to know more about Power BI.
